

Burrokeet - Introduction

Burrokeet is a software applicaiton for building and editing Content Packages for use in Virtual Learning Environments. Within this section of the documentation you will find instructions on how to create a new Content Package and subsequently manage it using Burrokeet.

You can navigate your way around the documentation using the menu on the lest, however, we recomend you begin by familiarising yourself with the common use cases for the software, alternativley you could start by getting to grips with the User Interface of the application.
